TARGET AUDIENCE

- The application will be for the cashier behind the till.
- Main aim of the project is to make it simple and easy to use for the user to work in a pressured environment
- Also, management of the company are to use application to find total sales and add/edit/delete items.

TOOLS USED

Microsoft Azure to be used predominantly for modelling of application look and feel
C# will be used to build the application

MAIN AIM OF THE PROJECT

The current use of a paper menu does not work well for the company and therefore, this has motivated me to improve the current environment in which they work making it more technologically advanced.

- Removes unnecessary paperwork.
- Can calculate sales figures
- Improves working environment for employees
